表 1 案例数据集(Petal.Width)分析结果

Species	中位数	四分位差	χ^2	p	组间差异显著性
setosa	2.00	0.10			setosa-versicolor***
versicolor	1.30	0.30	131.185	<0.001	setosa-virginica***
virginica	2.00	0.50			versicolor-virginica***

注：***: Adj.p < 0.001。

Table 1

Medians, Interquartile Ranges, and Results of Kruskal-Wallis Test for Sepal Length

Species	*Mdn*	IQR	Kruskal-Wallis		Multiple Comparisons			Effect Size	
			χ^2(df)	*p*	Comparison	*Z*	*Adj.p*	*r*	95%CI
setosa	5.00	0.40			setosa-versicolor	-6.106^{***}	< .001	−0.865	[−0.912, −0.795]
versicolor	5.90	0.70	96.937(2)	< .001	setosa-virginica	-9.742^{***}	< .001	−0.969	[−0.980, −0.952]
virginica	6.50	0.75			versicolor-virginica	-3.635^{***}	.001	−0.579	[−0.711, −0.409]

Note. A Kruskal – Wallis test was conducted, followed by post hoc pairwise Wilcoxon rank-sum tests with Holm adjustment. Effect sizes were quantified using rank-biserial correlations with 95% confidence intervals, computed in R using the *effectsize* package. *** *Adj.p* < .001. Mdn = median; IQR = interquartile range.
